

Prescription Life: Medication For A Sick World

Prescription Life is prescribed for those who have a desire to develop the ability to analyze thought and view situations objectively. Does this mean that you must already be a highly professional analyst? Of course not! What it does mean is that you must begin seeing things without bias if you want to be able to understand how past thoughts, present decisions and actions are likely to influence future conditions. Prescription Life is simply learning insight from experiences. As you mentally ingest its formulas, do not focus too much on remembering the written words, but work on applying them to the emotional experience in your life (both past and present).
