

## Eclipse: Living in the Shadow of Chinas Economic Dominance

By most accounts, China has quickly grown into the second largest economy in the world. In this controversial new book, Subramanian argues that China has already become the most economically dominant country in the world in terms of wealth, trade and finance. Its dominance and eclipsing of US global economic power is more imminent, more broad-based and larger in magnitude than anyone has anticipated. Subramanian compares the economic dominance of China with that of the two previous economic superpowers, the United States and the United Kingdom, and highlights similarities and differences. One corollary is that the fundamentals are strong for the Chinese currency to replace the dollar as the worlds reserve currency. The final chapter forecasts how the international economic system is likely to evolve as a result of Chinese dominance.
